DOUBLE-ACTING HYDRAULIC CYLINDER

Max. Capacity: 206.4 Tons at 10,000 PSI

**DANGER: To help avoid possible serious personal injury or death,**

- In the event that the cylinder retract port is ever restricted or plugged, a double-acting cylinder relief valve will help prevent excessive pressure from building in the cylinder. DO NOT attempt to adjust or service this relief valve! If oil leakage is detected from this relief valve, discontinue use of the cylinder immediately and contact Power Team or OTC Technical Services. Only Power Team or OTC Authorized Hydraulic Service Centers should service this relief valve.
