

Service Tools

Tools for the Repair and Maintenance of Power Team Hydraulic Products

Hydraulic repair tools can extend products service life while reducing rebuild turnaround times during rebuilding and promoting safer maintenance practices. Following factory procedures helps prevent part damage during disassembly and rebuilding.

Coupler Relief Tool

ST-0001

This reversible tool fits either coupler half and is designed to safely release pressure from couplers that have become pressure-locked due to improper connection or mechanical failure.

Clear Reservoirs

61243-CLEAR

Clear 1/2-gallon reservoir designed for hydraulic fluid storage and testing. The transparent construction allows for easy monitoring of fluid levels and fluid condition.

61165-CLEAR

Clear 2-gallon reservoir designed for hydraulic fluid storage and testing. The transparent construction allows for easy monitoring of fluid levels and fluid condition.

Service Tools

SR-TOOLS

This comprehensive kit includes one of each service tool featured in this sales sheet, packaged in a convenient storage container.

ST-0002

This tool is designed to help prevent damage to sealing surfaces when removing shear seals from hydraulic components.

ST-0055

This tool is designed for the quick installation of the shifter O-ring and backup washer in the low-pressure pump body of all PE, PA, and PG55, PG60, PG90, and PG120 Series hydraulic pumps.

ST-0xxC

These tools are designed for the removal of retainer nuts from "C" series cylinders. Available for 5-, 10-, 15-, and 25-ton cylinders. All retainer nut tools fit a 3/8-inch ratchet or torque wrench.

ST-0xxH

This group of tools is designed to remove and install lower spring retainers on RH Series hydraulic cylinders. Available for 10-, 20-, 30-, and 50-ton models. All sizes fit the ST-000H support stand.
